

Automation Test Scenarios

by Nishith Vadher on 22-May-26

Assignment Website URL - <https://automationexercise.com>

I have created basic framework in **Playwright** using **Typescript** as language for Automation Regression testing for the given website. Additionally, I have design and develop Four Automation Test scripts for below selected journeys.

Please find the answers for below questions -

- Can you review the website and pick six most important user journeys from the site?

Answer –

1	Login Journey
2	Logout Journey
3	Search Product Journey
4	View Product, Add to Cart and View Cart Journey
5	Complete Shopping Journey
6	User Registration Journey
7	Search Category and Brand Journey

- Out of the six user journeys proceed to pick four journeys to script against and explain why you picked these journeys?

Answer –

1	Login Journey	Scripting Done
2	Logout Journey	Scripting Done
3	Search Product Journey	Scripting Done
4	View Product, Add to Cart and View Cart Journey	Scripting Done

I have selected first three journeys, which are very important for regression testing as first any User should able to do **Login** on the website and then user should able to **Logout**. After that any user should able to **search the product** for shopping and should able to **view product details**. After viewing product, if user like the product, then should able to **add the product to cart (add to cart)** and further adding the product to cart, user should **view the cart**. Once user has added all the required products into the cart then proceed to checkout and if not logged in do login or register the website and do final payment and complete the shopping.

- Build a basic framework from scratch and script the four journeys you have chosen previously. Languages should be Typescript (preferable) or JavaScript, and making use of Webdriver.io (preferable) or Playwright to match our current technologies.

Answer –

I have taken **first four journeys** from the **above table** and developed automation test scripts from scratch. I have created a **basic automation framework** in **Playwright**, using **Typescript** as language. All the four journeys are designed, developed and executed in **Chromium** browser. Reports are also generated and four test scripts were passed, adding few screenshots for reference -

Note:

- 1> I have also covered a **Negative scenario** for **incorrect password** while testing **Login functionality** script.
- 2> I have provided comments for most of the lines for better understanding the code and its purpose.
- 3> I have used **MS-VS code** for writing the scripts and done execution for **only Chromium browser** for **Playwright framework** and **Typescript language**.

Few Screenshots –
